Figure 3. Topical N-palmitoyl serinol (NPS) attenuates epidermal hyperproliferation and inflammatory infiltration in a murine model of atopic dermatitis-like skin. Skin biopsies were taken following 4 wk of daily applications of 1-fluoro-2,4-dinitrobenzene (DNFB) with or without NPS. A — Normal mouse skin. B — Mouse skin treated with DNFB + ethanol. C — Mouse skin treated with DNFB + 0.5% NPS.
