

WILL TICKS GET THROUGH? NOT WITH YOU!

Ticks can be active when temperatures reach 4°C.¹ While ticks may not be a risk every day of the year, in some regions there may be days every month of the year when ticks could be out looking for a host to feed on.

Your City:

Days in 2024 when the temperature reached a minimum of 4°C

Understanding tick activity, performing daily tick checks, and avoiding locations where ticks can be found are steps you can do every day to keep your pets safe.

Ask your veterinarian about tick control products to protect your pet from ticks and tick-related disease for the entire risk period.
